Under H.R. 2883, the Federal Trade Commission could take civil action against individuals or entities involved in submitting petitions to the Food and Drug Administration (FDA) that the FDA finds are intended primarily to delay approval of a pending marketing application, including applications submitted for the marketing of lower-priced generic or biosimilar drugs. Under current law and FDA guidance, the FDA may summarily deny petitions that do not on their face raise valid scientific or regulatory issues. Under the bill, such petitions would presumptively be considered illegal under the Federal Trade Commission Act, unless the petitioner could prove the petition's merits.

On the basis of CBO's examination of past cases involving petitions to the FDA, CBO expects that the threat of substantial penalties under the bill would deter some parties from submitting petitions that would otherwise delay the marketing of lower-priced drugs. The estimated budgetary effects would stem from more generic or biosimilar drugs' entering the market earlier, on average, than would be the case under current law, resulting in lower federal spending for prescription drugs and for health insurance subsidies.

CBO has not completed an estimate of the effects of H.R. 2883 on spending subject to appropriation.

The areas of significant uncertainty for this estimate include CBO's estimates of sales, market effects, and the timing of introductions of new pharmaceutical products.

H.R. 2883 contains no intergovernmental or private-sector mandates.

On June 6, 2022, CBO transmitted a cost estimate for [S. 1425, the Stop STALLING Act](#), as reported by the Senate Committee on the Judiciary on December 8, 2021. The two versions of the bill are similar and their estimated costs are the same.
